

Conformity of unique product

We are Donkey Trailers and build the lightest welded large trailers is all of Europe/worldwide. The trailers are weatherproof and made of aluminum and stainless steel. We assemble each product by hand and work with a network of local subcontractors to manufacture specific parts such as welding the trailers. That is why the label is welded and assembled in Belgium. Each part can therefore easily find a second life during disassembly and be easily recycled. The packaging materials for shipping the trailers and parts are also recycled materials. The trailers can be expanded with different options/upgrades. The frame is designed to easily attach and transport various materials. This makes Donkey Trailers a unique concept through the combination of materials, light, durable, easily recyclable and at the same time a well thought-out system expandable with several options.
