

# Side walls information sheet

<p><b>Walls with plastic connector</b></p> <p>An aluminum frame connected with plastic connectors. This can be made at any height. This frame is bolted onto the trailer frame. A plate can be mounted against this frame. We often use Dibond/AluPanel panels for this purpose.</p>	
<p><b>Upwall parts</b></p> <p>These are aluminum pieces standing on the frame. A plate can be mounted against this frame. We often use Dibond/AluPanel panels, wood or plastic for this.</p> <p>These aluminum pieces are also sold separately and can be finished by you. We have these in stock in heights of 15 and 30 cm. Other heights can be made on demand.</p>	
<p><b>Panel bolted on the side</b></p> <p>This is a piece of plate in alupanel screwed against the side of the frame. Height is customizable.</p>	
<p><b>Panel welded on the frame</b></p> <p>This is a 5 mm thick edge welded to the frame. Ideal to prevent e.g. bins from sliding off the frame. This can be made at any height. Usually we do 3 or 5 cm. Other heights on demand.</p>
